Greetings Studio

2012 — 2013 [TayaIT, Egypt]

An iOS App for creating and sharing e-cards and visual sentiments. I was responsible for technical as well as managerial roles in this project in addition to collaborating in design duties such as product design and user-experience design. *[**Technologies:** Objective-.C, iOS, UML, Java]*

Roles / Duties

Technical team-leader.

Software architect.

Product analysis and design.

Developed prototypes.

Collaborated with marketing team.

Inbox Screen

Achievements

The direct user feedback and iterative publishing platform of the Apple Store was a rich learning experience in software design & development. We learned progressively how to design and build better products.

App Icon

The rating of the App improved on the App Store and stabilized at 4 stars with some good user reviews.

Project Grading & Simulation Tool

2012 [Computer Science Department, GUC, Egypt]

Educational tool developed for the Artificial Intelligence (AI) class of the German University in Cairo. AI projects can be divided to Environment and Agent where the students build agents and teachers build environments to evaluate / grade the projects.

The tool allows the teacher to write a single environment and students to use their programming language of choice to build agents. The system is (1) an inter-language interface between agents and environments and (2) an auto-grading tool. *[**Technologies:** C++, java, RL-Glue]*

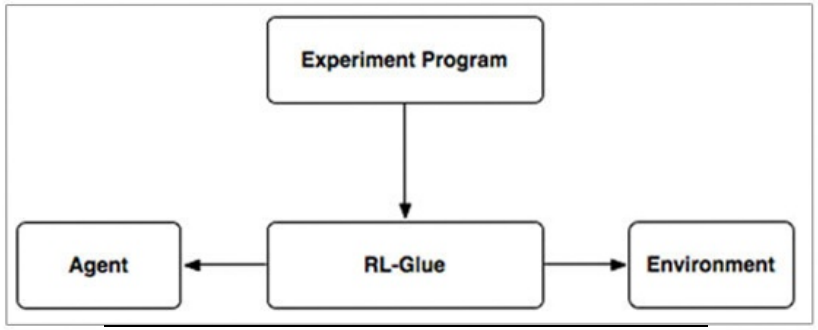
Roles / Duties

Founded and led the project.

Java and C++ development.

Achievements

We received agents in four languages, all of which were tested and evaluated with ease.



The architecture of RL-Glue, the technology we used to build our system.
