Tawla iOS App

2011 — 2013 [TayaIT, Egypt]

A backgammon board game App on the iOS mobile platform. I was involved in three different roles in this project. I lead the development team; worked with the marketing and UI/art design teams on a semi-daily basis; and updated and improved the design of the software components and architecture of the software product. *[***Technologies:** *iOS, UML, ObjectiveC]*

Roles / Duties

Team leader of the software development team.

Java prototyping, overseeing Java to ObjectiveC translation.

Updated the architecture for scalability and performance.

Closely collaborated with the UI/art design team & marketing.

Achievements

Throughout 2011-2013, the overall rating of the App steadily improved from 3 to 4 stars on the Apple Store.

R&D Solution Development

2011 — 2012 [TayaIT, Egypt]

This theme of my work has focused on (i) solution development in addition to development of computer players for games, (ii) rapid R&D prototyping and (iii) the design and analysis of various algorithms.

Initiated and led a small team with rotating members which grew up to four at times. We designed and developed various solutions for software products developed by TayaIT. The team also designed and improved various algorithms for different projects that where on-going at the time. *[***Technologies:** *Java, C++, machine learning engines, logic reasoning tools]*

Roles / Duties

Team-leader and principal-researcher.

Java, C++, prolog developer prototyper.

Planned the work of the team.

Algorithm Designer and Developer.

Carried out feasability analysis of various design ideas.

Achievements

The AI components the team produced for the Tawla App helped eliminate many negative reviews the App had received in earlier versions regarding its old computer players.

Some prototypes became integrated into the Greetings Studio App.

The team designed and improved the design of various core algorithms for different applications.
