Solution Architect · Technical Leadership

Solution architect and technical leader with 15 years across enterprise platforms, EU-funded industrial R&D, and a PhD in federated data architecture. I design systems and data platforms that evolve reliably as requirements and organizations change, translate business needs into technical architecture, and set the engineering practices that let teams deliver on it — often building alignment and adoption across teams and divisions with no formal authority over them. Former Lead Solution Architect at PUMA; currently co-founder of a production healthcare app, where I also apply and validate modern AI-assisted engineering practice.

Work Experience

Co-Founder & Technical Lead **2025 – Present**

Pflegebericht.com and Independent AI-adoption advisory (*Self-employed — Bavaria, Germany*)

- Own product, architecture, and engineering end-to-end for a mobile-first documentation app for German Verhinderungspflege carers; shipped v1 to production in 6 weeks (TypeScript/React/Supabase), then a stable v2 — full cycle from concept to live product with real users.
- Designed and applied an AI-assisted engineering methodology on the app's production codebase: architecture conventions, machine-checkable contracts, and quality gates that keep development reliable as AI tooling is integrated into the workflow.
- Advised Lomisoft (early-stage healthcare SaaS) on solution architecture and AI integration strategy; designed a modular architecture that lets prototypes evolve into production. Ran pilot-user focus groups and fed findings back into technical design.

Lead Solution Architect **2024 – 2025**

PUMA SE - Global E-commerce Engineering

- Led two engineering teams (10 engineers, 2 leads); ran onboarding and coaching improving velocity & retention.
- Cut 30% of critical tech debt via a structured effort–value program (CI/CD stabilization, automated testing, reliability), producing a multi-quarter roadmap adopted across teams.
- Guided a cross-team optimization initiative that improved PUMA.com performance by 20% in two quarters.
- Founded and ran a global cross-division newsletter to align engineering and business stakeholders on technical direction and status — adopted org-wide with no formal mandate.
- Unblocked a stalled cross-functional initiative with a partner team by simplifying its requirements, enabling delivery without formal authority over the team.
- Resolved a 90%-order-loss production outage in 24h; established post-mortem practices cutting MTTR by 40%.
- Partnered with product, design, and business stakeholders to shape the technical solution architecture roadmap on GCP.
- Piloted AI/LLM tooling for engineering productivity and code-quality gains; evaluated integration patterns.

Doctoral Researcher **2022 – 2023**

Independent - Germany

- Completed PhD (Dr. rer. nat., Bamberg) on federated inter-organizational data architecture — systems that share and govern data across organizational boundaries without integrating them. The problem space now addressed by Catena-X and the EU Data Act.
- Ran market assessment and feasibility studies; produced go-to-market scenarios for commercializing research IP.
- Built Muze-AI, an LLM-powered music recommendation prototype (Python, LangChain) — 2023–2024

Research Associate - Team Lead, Architect, Data Solutions Engineer **2015 – 2021**

University of Bamberg - EU Aerospace & Manufacturing Consortium Project (€3.5M, Horizon2020)

- Designed and built an inter-organizational data-cataloging system connecting sensor data from microwave curing ovens, simulation tools, and measurement systems across 8 partners in 5 countries (incl. Airbus, Faurecia) with incompatible tools and confidentiality constraints; presented and negotiated architecture directly with partner technical leads; contributed hands-on to 4 of 6 components.
- Led a cross-functional team of 4 engineers and researchers; ran hiring, onboarding, and mentoring.
- Established team-wide standards for architecture, scalability, security, and reliability.
- Field-tested the federated data-sharing model across three domains (manufacturing, IoT/agriculture, crowd data).

Dean / Lecturer **2014 - 2015**

University of Technology Twintech, Yemen

- Led the IT and Multimedia faculties, reporting to the university president.

R&D Engineer / Team Lead - AI & Mobile **2011 – 2014**

TayaIT - Egypt

- Led a 3-engineer team; delivered AI players that lifted game ratings from 3.0 → 4.5/5.
- Directed iOS app development; achieved 10x early-stage user engagement growth.
- Advised CEO on technical and operational decisions; saved an estimated 10 person-months.

Skills

Architecture	Solution architecture · Platform architecture · System design · API design · Technical roadmapping · Data & metadata architecture · Semantics & ontologies · Data governance · Rights/access modeling (ODRL) · Interoperability standards (ODCS, DCAT)
Engineering	Python · PostgreSQL/Supabase · REST APIs · Node.js · TypeScript · React · CI/CD · Reliability engineering · Incident response · LLM application development (LangChain) · AI-assisted engineering practice
Leadership	Hiring · Coaching · Cross-functional alignment · Stakeholder management · Influence without authority
Compliance/Regulatory	GDPR · EU AI Act (risk-tier/use-case provisions) · Data governance frameworks

Languages

English (Fluent)

German (B1/B2)

Education

University of Bamberg - Dr. rer. nat., 2023

Faculty of Information Systems and Applied Computer Sciences.

- Dissertation: *The Basin Network - A Model for Data Sharing and Exchange.*

German University in Cairo

- M.Sc., *Computer Science & Engineering (Specialization: Artificial Intelligence & Robotics)*
- B.Sc., *Computer Science & Engineering*
